

Parte de código en Codeblocks 2.1.2

The image shows the Codeblocks IDE interface. The top window displays the source code for a C program that calculates the squared norm of a vector. The code includes a header, a main function, input validation, a loop for inputting vector components, a calculation loop, and a final output. The bottom window shows the program's execution, where the user has entered 4 components with values 2, 3, 1, and 4, resulting in a squared norm of 30.00.

```
1  #include <stdio.h>
2
3  int main() {
4
5      int n, i;
6      float vec[10], res = 0;
7
8      // Validación del número de componentes
9      do {
10         printf("Ingrese el numero de componentes del vector (max 10): ");
11         scanf("%d", &n);
12
13         if (n <= 0 || n > 10) {
14             printf("Numero no valido, por favor ingrese otro numero.\n");
15         }
16
17     } while (n <= 0 || n > 10);
18
19     // Ingreso de componentes y cálculo
20     for (i = 0; i < n; i++) {
21         printf("Ingrese componente %d: ", i + 1);
22         scanf("%f", &vec[i]);
23
24         res = res + (vec[i] * vec[i]);
25     }
26
27     // Resultado
28     printf("La norma al cuadrado es: %.2f", res);
29
30     return 0;
31 }
32
```

Execution Output:

```
C:\Users\G300\Downloads\Ur x + v
Ingrese el numero de componentes del vector (max 10): 4
Ingrese componente 1: 2
Ingrese componente 2: 3
Ingrese componente 3: 1
Ingrese componente 4: 4
La norma al cuadrado es: 30.00
Process returned 0 (0x0)   execution time : 13.848 s
Press any key to continue.
